

## Claims

[c1]

WHAT IS CLAIMED IS:

1. An automated event presentation system for capturing and viewing an event having event participants, comprising:  
an omni-directional camera system that provides an omni-directional image of the event and that simultaneously monitors the event participants and films the event;  
an automated online broadcasting system that controls the omni-directional camera system and broadcasts the event; and  
a viewer platform in communication with the automated online broadcasting system that allows a viewer to view the broadcasted event.

[c2]

2. The automated event presentation system as set forth in claim 1, wherein the omni-directional camera system includes a camera having a wide-angle view of approximately 360 degrees.

[c3]

3. The automated event presentation system as set forth in claim 1, wherein the omni-directional camera system includes a plurality of cameras that combined provide an approximately 360-degree field-of-view.

[c4]

4. The automated event presentation system as set forth in claim 2, wherein the camera includes a wide-angle imaging device.

[c5]

5. The automated event presentation system as set forth in claim 1, wherein the automated online broadcasting system further comprises a switching module that allows switching between of the omni-directional image of the event.

[c6]

6. The automated event presentation system as set forth in claim 1, wherein the omni-direction camera system has a resolution of approximately 1000 by 1000 pixels.

[c7]

7. The automated event presentation system as set forth in claim 1, wherein the automated online broadcasting system further comprises an analysis module for finding and indexing the event participants.

[c8]

8. A method for filming an event having event participants and presenting the filmed event to a viewer, comprising:  
filming the event using an omni-directional camera system to provide an omni-

directional image that contains each of the event participants;  
determining a location of the event participants in the omni-directional image; and  
providing a user interface to allow the viewer to choose which of the event participants in  
the omni-directional image to view.

[c9] 9. A computer-readable medium having computer-executable instructions for  
performing the method recited in claim 8.

[c10] 10. The method as set forth in claim 9, further comprising storing annotations associated  
with the event and synchronizing these annotations with the event.

[c11] 11. The method as set forth in claim 10, further comprising allowing the viewer to select  
which of the annotations to store.

[c12] 12. The method as set forth in claim 10, wherein which annotations to store may be  
selected: (a) while the event is occurring; (b) after the event has occurred.

[c13] 13. The method as set forth in claim 10, wherein the annotations include at least one of:  
(a) a whiteboard; (b) a digital chat regarding the event; (c) a digital question and answer  
session over a computer network.

[c14] 14. The method as set forth in claim 8, wherein the location of the event participants in  
the omni-directional image is determined by using a speaker detection technique to  
determine which of the event participants is speaking.

[c15] 15. The method as set forth in claim 14, wherein a multiple camera views may be  
obtained from the omni-directional image and further comprising using the speaker  
detection technique to follow event participants that are speaking by switching from one  
camera view to another camera view.

[c16] 16. The method as set forth in claim 14, wherein the speaker detection technique is a  
microphone-array sound source localization technique that uses a microphone array and  
sound source localization algorithms.

[c17] 17. The method as set forth in claim 8, wherein the omni-directional camera system is  
one of: (a) a single panoramic camera; (b) an array cameras having an approximately  
360-degree field-of-view.

[c18]

18. A method for displaying at least a portion of an omni-directional image capturing an event occurring within an event environment, comprising:  
filming the event using an omni-directional camera system having a single camera to produce the omni-directional image;  
transmitting the omni-directional image from a broadcasting platform to a viewer platform using a computer network; and  
using the viewer platform to allow a viewer to select which portion of the omni-directional image the viewer would like to view.

[c19]

19. The method as set forth in claim 18, wherein the viewer may select to view multiple portion of the omni-directional image.

[c20]

20. The method as set forth in claim 18, wherein the omni-directional image contains all event participants within the event environment.

[c21]

21. An automated event presentation system for capturing an event, comprising:  
a high-resolution omni-directional camera system that provides an omni-directional image of the event, the omni-directional image containing multiple camera views;  
an automated online broadcasting system capable of broadcasting the omni-directional image over a computer network;  
a viewer platform in communication with computer network that receives the omni-directional image; and  
a virtual director module within the automated online broadcasting system that determines which of the multiple camera views within the omni-directional image to display on the viewer platform by applying a set of expert production rules.

[c22]

22. The automated event presentation system as set forth in claim 21, wherein the virtual director module further comprises a switching module that provides switching between the multiple camera views of the event.

[c23]

23. The automated event presentation system as set forth in claim 22, wherein the switching module provides instantaneous switching between the multiple camera views.

[c24]

24. The automated event presentation system as set forth in claim 22, wherein the switching module is capable of providing negative switching that allows switching to a camera view of a person speaking before the person begins to speak.
